

In the Abstract:

A film-shaped, mucoadhesive, pharmaceutical administration form having a content of ~~at least one active agent. The active agent is a cannabis~~ [[agent]] agents. The administration form adheres to the oral mucosa, after which the active agents are released directly to the mucosa or are released into the surrounding saliva. The administration form comprises a polymer matrix in which the cannabis agents are present in a dissolved, dispersed or emulsified form. The polymer matrix possesses mucoadhesive properties and contains polymers that are water-soluble or swellable in aqueous media, the polymer portion being in the range of 5-95%-wt. relative to the dry matter of the administration form. The administration form may optionally contain one or more additives, such as colorants, flavourings or antioxidants. The administration form can be used in the treatment of various diseases and symptoms, in particular, conditions of pain, nausea, vomiting, withdrawal symptoms, anorexia, cachexia, epileptic seizures, Parkinson's disease, multiple sclerosis or migraine.
